Centrifugal fan
This user’s manual is a main operating document intended for technical, maintenance, and operating staff. The manual contains information about purpose, technical details, operating principle, design, and installation of the VK unit and all its modifications.

Technical and maintenance staff must have theoretical and practical training in the field of ventilation systems and should be able to work in accordance with workplace safety rules as well as construction norms and standards applicable in the territory of the country.

The information in this user’s manual is correct at the time of the document’s preparation.

The Company reserves the right to modify the technical characteristics, design, or configuration of its products at any time in order to incorporate the latest technological developments.

No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means in any information search system or translated into any language in any form without the prior written permission of the Company.
SAFETY REQUIREMENTS

• Please read the user’s manual carefully prior to installing and operating the unit.
• All user’s manual requirements as well as the provisions of all the applicable local and national
collection, electrical, and technical norms and standards must be observed when installing
and operating the unit.
• The warnings contained in the user’s manual must be considered most seriously since they
contain vital personal safety information.
• Failure to follow the rules and safety precautions noted in this user’s manual may result in an
injury or unit damage.
• After a careful reading of the manual, keep it for the entire service life of the unit.
• While transferring the unit control, the user’s manual must be turned over to the receiving
operator.

UNIT INSTALLATION AND OPERATION SAFETY PRECAUTIONS

• Disconnect the unit from
power mains prior to any
installation operations.

• The unit must be grounded!

• Do not change the power
cable length at your own
discretion.
• Do not bend the power cable.
• Avoid damaging the power
cable.
• Do not put any foreign objects
on the power cable.

• Do not use damaged
equipment or cables when
connecting the unit to power
mains.
• Do not touch the unit controls
with wet hands.
• Do not carry out the
installation and maintenance
operations with wet hands.

• Unpack the unit with care.

• While installing the unit, follow
the safety regulations specific
to the use of electric tools.

• Do not lay the power cable of
the unit in close proximity to
heating equipment.

• Do not operate the unit
outside the temperature range
stated in the user’s manual.
• Do not operate the unit
in aggressive or explosive
environments.
• Do not wash the unit with
water.
• Protect the electric parts of the
unit against ingress of water.
• Do not allow children to operate the unit.

• Do not store any explosive or highly flammable substances in close proximity to the unit.

• Do not open the unit during operation.

• Do not block the air duct when the unit is switched on.

• Do not sit on the unit and avoid placing foreign objects on it.

• Disconnect the unit from power mains prior to any technical maintenance.

• When the unit generates unusual sounds, odour, or emits smoke, disconnect it from power supply and contact the Seller.

• Do not direct the air flow produced by the unit towards open flame or ignition sources.

• In case of continuous operation of the unit, periodically check the security of mounting.

• Use the unit only for its intended purpose.

**TAKE STEPS TO PREVENT INGRESS OF SMOKE, CARBON MONOXIDE, AND OTHER COMBUSTION PRODUCTS INTO THE ROOM THROUGH OPEN CHIMNEY FLUES OR OTHER FIRE-PROTECTION DEVICES.**

**SUFFICIENT AIR SUPPLY MUST BE PROVIDED FOR PROPER COMBUSTION AND EXHAUST OF GASES THROUGH THE CHIMNEY OF FUEL BURNING EQUIPMENT TO REVENT BACK DRAFTING.**

**THE PRODUCT MUST BE DISPOSED SEPARATELY AT THE END OF ITS SERVICE LIFE. DO NOT DISPOSE THE UNIT AS UNSORTED DOMESTIC WASTE.**
PURPOSE
The product described herein is a centrifugal inline fan for supply or exhaust ventilation of premises. The fan is designed for connection to ø 100, 125, 150, 200, 250 and 315 mm air ducts. A model with a duct diameter of 150 mm can be mounted in a duct with a diameter of 150 or 160 mm.

THE UNIT SHOULD NOT BE OPERATED BY CHILDREN OR PERSONS WITH REDUCED PHYSICAL, MENTAL, OR SENSORY CAPACITIES, OR THOSE WITHOUT THE APPROPRIATE TRAINING.

THE UNIT MUST BE INSTALLED AND CONNECTED ONLY BY PROPERLY QUALIFIED PERSONNEL AFTER THE APPROPRIATE BRIEFING.

THE CHOICE OF UNIT INSTALLATION LOCATION MUST PREVENT UNAUTHORIZED ACCESS BY UNATTENDED CHILDREN.

Transported air must not contain any flammable or explosive mixtures, evaporation of chemicals, sticky substances, fibrous materials, coarse dust, soot and oil particles or environments favourable for the formation of hazardous substances (toxic substances, dust, pathogenic germs).

DESIGNATION KEY

Network parameters
- 220-240 V/50 Hz
220 V/60 Hz: supply voltage 220 V, supply frequency 60 Hz

Additional options
Q: low-power motor
Duo: two-speed motor
U: speed controller with an electronic thermostat and an integrated temperature sensor. Temperature-based operation logic
U1: speed controller with an electronic thermostat and an integrated temperature sensor. Timer-based operation logic
Un: speed controller with an electronic thermostat and an external temperature sensor fixed on a 4-meter cable. Temperature-based operation logic
U1n: speed controller with an electronic thermostat and an external temperature sensor fixed on a 4-meter cable. Timer-based operation logic
U2: speed controller with an electronic thermostat and an integrated temperature sensor. Temperature-based switching on/off
U2n: speed controller with an electronic thermostat and an external temperature sensor fixed on a 4-meter cable. Temperature-based switching on/off
P: integrated smooth speed controller
V: built-in speed switch (for two-speed motors)
R1: cable with mains plug

Air duct diameter [mm]
100; 125; 150; 200; 250; 315

Motor type
High-powered motor

Unit series
Centrifugal fan
The fan is designed for indoor application with the ambient temperature ranging from +1 °C up to +45 °C and relative humidity up to 80%. Hazardous parts access and water ingress protection rating is IPX4.

The unit is rated as a class II electric appliance.

The unit design is constantly being improved, thus some models may be slightly different from those described in this manual.

**DESIGN AND OPERATING PRINCIPLE**

1. Casing
2. Motor
3. Impeller
4. Mounting bracket
5. Terminal box

The fan is equipped with a single-phase motor with an external rotor, equipped with a centrifugal impeller. The Duo models are supplied with a two-speed asynchronous motor.

The fan is rated for continuous operation.

**Electronics operation algorithm**

The **VK U/U1/U2** fan is equipped with an electronic module TSC (speed controller with an electronic thermostat) for automatic speed control (air flow) depending on the air temperature.

The terminal compartment incorporates 2 control knobs:
- presetting speed
- setting electric thermostat threshold value

The fan is equipped with two indicators:
- temperature sensor indicator (hereinafter referred to as TSI) - yellow colour
- motor control indicator (hereinafter referred to as MCI) - green/yellow colour

When the fan turns on, the TSI indicates the unit operation algorithm:
- one pulse - U
- two pulses - U1
- three pulses - U2

The MCI lights up in green when the motor rotates and in red when it stops (or rotates very slowly). To set the thermostat threshold, rotate the thermostat control knob clockwise to increase or counter-clockwise to decrease the temperature set point. To set the fan speed (air flow), rotate the speed control knob in the same way.

**VK U**:

In this case, fan speed switching operations are rare.

The TSI lights up and the fan switches to the maximum speed as the room air temperature exceeds the set point.

As the air temperature drops 2 °C below the set point or if the initial temperature is below the set point, the TSI goes out and the fan operates with the set speed.

**VK U1**:

The speed switching operations are more frequent as compared to the temperature-based functioning logic (U), but one speed interval continues at least 5 minutes.

The TSI lights up and the fan switches to the maximum speed as the room air temperature exceeds the set point.

As the air temperature drops down below the set point, the TSI starts blinking, the timer starts a 5-minute countdown and then the fan switches to the set lower speed and the TSI goes out.

**VK U2**:

The fan starts only at a certain air temperature.

The TSI lights up and the fan switches to the set speed as the room air temperature exceeds the set point.

As the air temperature drops 2 °C below the set point or if the initial temperature is below the set point, the TSI goes out and the fan turns off.
Mounting sequence:
1. Remove the bolts on both sides of the casing, install the mounting brackets and tighten the bolts, aligning the holes in the brackets with the holes in the casing.
2. Mark holes for drilling.
3. Drill the holes in the wall or the ceiling for dowels.
4. Fix the fan with the screws.
5. Connect the air ducts of the corresponding diameter to the fan.
CONNECTION TO POWER MAINS

POWER OFF THE POWER SUPPLY PRIOR TO ANY OPERATIONS WITH THE UNIT.
THE UNIT MUST BE CONNECTED TO POWER SUPPLY BY A QUALIFIED ELECTRICIAN.
THE RATED ELECTRICAL PARAMETERS OF THE UNIT ARE GIVEN ON THE MANUFACTURER’S LABEL.

ANY TAMPERING WITH THE INTERNAL CONNECTIONS IS PROHIBITED AND WILL VOID THE WARRANTY.

- The unit is rated for connection to power mains with the parameters specified in the “Technical specifications” section, according to the wiring diagram.
- The connection must be made using durable, insulated and heat-resistant conductors (cables, wires).
- The actual wire cross section selection must be based on the maximum load current, maximum conductor temperature depending on the wire type, insulation, length and installation method.
- The external power input must be equipped with an automatic circuit breaker QF built into the stationary wiring to open the circuit in the event of overload or short-circuit.
- The position of the external automatic circuit breaker must ensure free access for quick power-off of the unit.
- The trip current of the automatic circuit breaker must exceed the maximum current consumption of the unit (refer to the “Technical data” section or to the unit label).
- The recommended trip current of the circuit breaker is the next current in the standard trip current row following the maximum current of the connected unit.
- The circuit breaker is not included in the delivery set and can be ordered separately.

![Wiring Diagram](Diagram 1: Connection of the fan to power mains)

![Wiring Diagram](Diagram 2: Connection of the fan to power mains with an external switch)

![Wiring Diagram](Diagram 3: Connection of the Duo fan to power mains)

Designation:
- L – line; N – neutral; QF – automatic circuit breaker; S – external switch (Diagrams 1, 2);
- S – switch (Diagram 3); X – input terminal block

WARNING! The fan is equipped with a thermal switch without self-resetting function.
To avoid a random restart of the thermal switch, the unit must not be powered through an external switching device, such as a timer, or connected to power mains usually turned on/off by public services.
TECHNICAL MAINTENANCE

DISCONNECT THE UNIT FROM POWER SUPPLY BEFORE ANY MAINTENANCE OPERATIONS!

Clean the product surfaces regularly (once in 6 months) from dust and dirt. To clean the fan, remove the self-tapping screws and remove the fan cover. To clean the fan, use a soft cloth or a brush wetted in a mild detergent solution. Do not allow water or liquid come into contact with electric components. Wipe the unit surfaces dry after cleaning. Install the cover back in place and screw the self-tapping screws.

WARNING! If the power cord is damaged, it must be replaced by the manufacturer, customer service, or similar qualified personnel in order to avoid danger.

STORAGE AND TRANSPORTATION REGULATIONS
- Store the unit in the manufacturer’s original packaging box in a dry closed ventilated premise with temperature range from +5 °C to +40 °C and relative humidity up to 70%.
- Storage environment must not contain aggressive vapors and chemical mixtures provoking corrosion, insulation, and sealing deformation.
- Use suitable hoist machinery for handling and storage operations to prevent possible damage to the unit.
- Follow the handling requirements applicable for the particular type of cargo.
- The unit can be carried in the original packaging by any mode of transport provided proper protection against precipitation and mechanical damage. The unit must be transported only in the working position.
- Avoid sharp blows, scratches, or rough handling during loading and unloading.
- Prior to the initial power-up after transportation at low temperatures, allow the unit to warm up at operating temperature for at least 3-4 hours.
MANUFACTURER’S WARRANTY

The manufacturer hereby warrants normal operation of the unit for 24 months after the retail sale date provided the user's observance of the transportation, storage, installation, and operation regulations. Should any malfunctions occur in the course of the unit operation through the Manufacturer's fault during the guaranteed period of operation, the user is entitled to get all the faults eliminated by the manufacturer by means of warranty repair at the factory free of charge. The warranty repair includes work specific to elimination of faults in the unit operation to ensure its intended use by the user within the guaranteed period of operation. The faults are eliminated by means of replacement or repair of the unit components or a specific part of such unit component.

The warranty repair does not include:
- routine technical maintenance
- unit installation/dismantling
- unit setup

To benefit from warranty repair, the user must provide the unit, the user’s manual with the purchase date stamp, and the payment paperwork certifying the purchase. The unit model must comply with the one stated in the user’s manual. Contact the Seller for warranty service.

The manufacturer’s warranty does not apply to the following cases:
- User’s failure to submit the unit with the entire delivery package as stated in the user’s manual including submission with missing component parts previously dismounted by the user.
- Mismatch of the unit model and the brand name with the information stated on the unit packaging and in the user’s manual.
- User’s failure to ensure timely technical maintenance of the unit.
- External damage to the unit casing (excluding external modifications as required for installation) and internal components caused by the user.
- Redesign or engineering changes to the unit.
- Replacement and use of any assemblies, parts and components not approved by the manufacturer.
- Unit misuse.
- Violation of the unit installation regulations by the user.
- Violation of the unit control regulations by the user.
- Unit connection to power mains with a voltage different from the one stated in the user’s manual.
- Unit breakdown due to voltage surges in power mains.
- Discretionary repair of the unit by the user.
- Unit repair by any persons without the manufacturer’s authorization.
- Expiration of the unit warranty period.
- Violation of the unit transportation regulations by the user.
- Violation of the unit storage regulations by the user.
- Wrongful actions against the unit committed by third parties.
- Unit breakdown due to circumstances of insuperable force (fire, flood, earthquake, war, hostilities of any kind, blockades).
- Missing seals if provided by the user’s manual.
- Failure to submit the user’s manual with the unit purchase date stamp.
- Missing payment paperwork certifying the unit purchase.

FOLLOWING THE REGULATIONS STIPULATED HEREIN WILL ENSURE A LONG AND TROUBLE-FREE OPERATION OF THE UNIT.

USER’S WARRANTY CLAIMS SHALL BE SUBJECT TO REVIEW ONLY UPON PRESENTATION OF THE UNIT, THE PAYMENT DOCUMENT AND THE USER’S MANUAL WITH THE PURCHASE DATE STAMP.
