

## Series

**VENTS VUT PB EC**

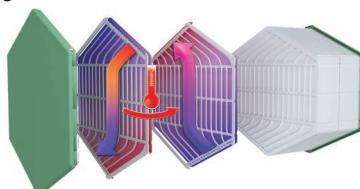

Air handling units in heat- and sound-insulated casing.

Air flow up to 410 m<sup>3</sup>/h.

Heat recovery efficiency up to 94 %

**■ Heat exchanger**

The units are equipped with a high-efficient counter-flow polystyrene heat exchanger. In the cold season the extract air heat is captured and transferred to the supply air stream which reduces the ventilation-generated heat losses.

**■ Frost protection**

To protect the heat exchanger from freezing in the cold season, the unit has a Frost Protection mode based on the temperature sensor readings. The Frost Protection mode is activated at an exhaust air temperature of +3 °C. After temperature increase the unit returns to the previous operation mode. In case of freezing danger, the supply fan is turned off in VUT 160/250/350 PB EC A14 units.

Three modes of frost protection are available in VUT 160/250/350 PB EC A21 models:

- gradual reduction of the supply fan speed
- with the bypass
- with the electric preheater (available as an accessory).

**■ Description**

The VUT PB EC air handling units are the fully-featured ventilation units that ensure air filtration, fresh air supply and stale air extract.

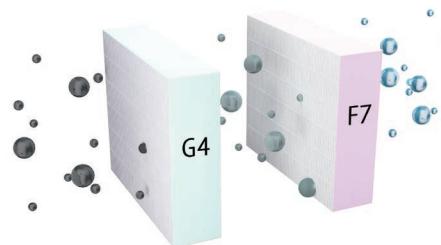

**■ Casing**

Made of galvanised steel, internally filled with a 40 mm heat- and sound-insulating layer of mineral wool.

**■ Filter**

Built-in panel filters with filtration class F7 provide efficient supply air filtration.

Panel filters with filtration class G4 provide extract air

**■ Fans**

High-efficient electronically-commutated motors with an external rotor and backward curved blades.

**■ Bypass**

The units are equipped with a 100 % bypass which can be opened for summer cooling.

**■ Control and automation**

The VUT PB EC A21 units are equipped with an integrated automation system.

The A21 controller enables integration of the unit into the **Smart Home System** or **BMS (Building Management Systems)**.

To control the unit via Wi-Fi, download the VENTS Home mobile app.

Google play

Download on the  
App Store

The **VUT PB EC A14** units are equipped with an integrated automation system and a wall-mounted control panel A14 with LED indication.

**■ Mounting**

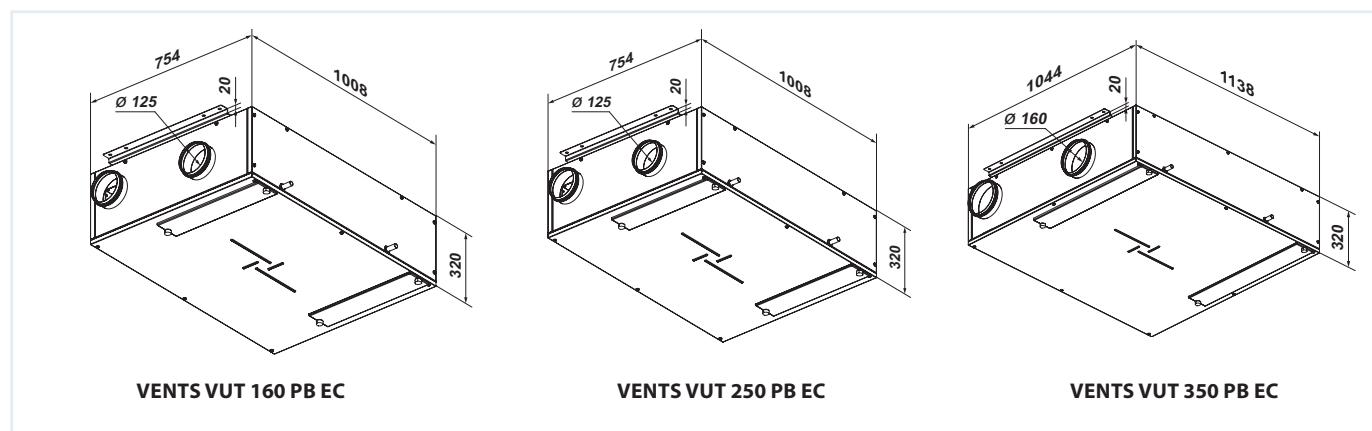

The units are designed for ceiling or wall mounting (horizontal spigot orientation) in a position allowing condensate collection and removal into a special drain pan. The access for filter maintenance and replacement is available from the bottom panel.
