This user’s manual is a main operating document intended for technical, maintenance, and operating staff.
The manual contains information about purpose, technical details, operating principle, design, and installation of the D/D1 unit and all its modifications.
Technical and maintenance staff must have theoretical and practical training in the field of ventilation systems and should be able to work in accordance with workplace safety rules as well as construction norms and standards applicable in the territory of the country.
The information in this user’s manual is correct at the time of the document’s preparation.
The Company reserves the right to modify the technical characteristics, design, or configuration of its products at any time in order to incorporate the latest technological developments.
No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means in any information search system or translated into any language in any form without the prior written permission of the Company.
All user’s manual requirements as well as the provisions of all the applicable local and national construction, electrical, and technical norms and standards must be observed when installing and operating the unit.

Disconnect the unit from power supply prior to any connection, servicing, maintenance, and repair operations.

**Only qualified electricians with a work permit for electrical units up to 1000 V are allowed for installation and maintenance.** The present user’s manual should be carefully read before beginning works.

• Single-phase power mains must comply with the acting local electrical norms and standards.
• Fixed electrical wiring must be equipped with an automatic circuit breaker.
• The unit must be connected to power mains through a double pole circuit breaker integrated into the fixed wiring system with opening of contacts at all poles. The gap between the circuit breaker contacts at all poles must be not less than 3 mm.
• Check the unit for any visible damage of the impeller, the casing, and the grille before starting installation. The casing internals must be free of any foreign objects that can damage the impeller blades.
• While mounting the unit, avoid compression of the casing! Deformation of the casing may result in motor jam and excessive noise.
• Misuse of the unit and any unauthorized modifications are not allowed.
• Do not expose the device to adverse atmospheric agents (rain, sun, etc.).
• Take steps to prevent ingress of smoke, carbon monoxide, and other combustion products into the room through open chimney flues or
other fire-protection devices. Sufficient air supply must be provided for proper combustion and exhaust of gases through the chimney of fuel burning equipment to prevent back drafting.

- Transported air must not contain any dust or other solid impurities, sticky substances, or fibrous materials.
- Do not use the unit in a hazardous or explosive environment containing spirits, gasoline, insecticides, etc.
- For effective functioning of the unit, it is necessary to ensure an appropriate fresh air supply into the room. Do not close or block the intake or extract vents in order to ensure the efficient air flow.
- Do not sit on the unit and do not put objects on it.
- The unit is allowed to be used by children aged from 8 years old and above and persons with reduced physical, sensory, or mental capabilities or no experience and knowledge provided that they have been given supervision or instruction regarding safe use of the unit and understand the risks involved.
- Do not allow children to play with the unit.
• The information in this user’s manual was correct at the time of the document’s preparation.
• The Company reserves the right to modify the technical characteristics, design, or configuration of its products at any time in order to incorporate the latest technological developments.
• No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means in any information search system or translated into any language in any form without the prior written permission of the Company.

WARNING! Similar to the use of any other household electrical appliances when operating this fan, the following basic rules must be followed:
• Never touch the fan with wet or damp hands.
• Never touch the fan when barefoot.

THE PRODUCT MUST BE DISPOSED SEPARATELY AT THE END OF ITS SERVICE LIFE. DO NOT DISPOSE THE UNIT AS UNSORTED DOMESTIC WASTE.
DELIVERY SET

Fan — 1 pc.
Screws and dowels — 4 pcs.
Plastic screwdriver (only for the models with a timer) — 1 pc.
User’s manual — 1 pc.
Packing box — 1 pc.

BRIEF DESCRIPTION

The unit described herein is an axial fan for exhaust ventilation of small and medium-sized utility spaces. The fan is designed for connection to Ø 100, 120, 125 and 150 mm air ducts, depending on the model.

OPERATION GUIDELINES

The fan is rated for connection to single-phase AC power mains. Power mains parameters are stated on the unit packaging and/or the label on the unit casing. Hazardous parts access and water ingress protection rating: IP34

WARNING! IP is indicated for an assembled unit.

The fan is rated for operation at the ambient temperature ranging from +1 °C up to +40 °C.

WARNING! Do not operate the fan outside the specified temperature range.

The unit is rated as the Class II (220-240 V, 50 Hz/220 V, 60 Hz) or the Class III (12 V/50 Hz) electrical appliance and requires no grounding.
### DESIGNATION KEY

**Unit voltage:**
- _: 220-240 V/50 Hz
- 220 V/60 Hz: supply voltage 220 V, power frequency 60 Hz

**Motor modifications:**
- _: basic motor
- L: motor on ball bearings
- Turbo: high-powered motor
- 12: low voltage motor 12 V/50 Hz

**Modifications:**
- K: non-return valve KO
- K1: non-return valve KO1

**Basic options:**
- V: pull cord switch
- T: turn-off delay timer
- VT: turn-off delay timer and pull cord switch
- TH: humidity sensor
- VTH: pull cord switch and humidity sensor

**Fan series**
- D/D1

**Outlet duct diameter [mm]**
- 100/120/125/150
MOUNTING

The fan is designed for wall (with the motors on ball and slide bearings) or ceiling (with the motors on ball bearings only, L option) mounting and can be used for direct outdoor air exhaust through a round duct or a duct system.

In case of installation through a duct system, select the duct cross section in accordance with the fan size (Fig. 1).

1. When installing the fan with direct air discharge outside through the wall, be sure to install a ventilation grille with louvre shutters or a ventilation hood on the outside to prevent rainfall, snow, leaves, branches, etc. from entering the duct.

To reduce the risk of condensate forming in the duct, the space between the hole in the wall and the duct must be insulated.

Install the air duct with the minimum slope of 1...2° downwards to the outer wall side for condensate removal (Fig 2).

2. The duct system should not exceed 5 meters and have more than two bends.

3. During ceiling installation, vertical air discharge upwards is not allowed even if there is a protective outer hood on the roof.

For ceiling mounting and air discharge to the roof, the duct system must include a condensate drain (Fig. 3).

**A condensate drain is not included in the delivery set of the fan and can be ordered separately.**

Check the fan for any visible damages of the impeller, the casing and the grille before starting installation. The casing internals must be free of any foreign objects which can damage the impeller blades.

While mounting the unit, avoid compression of the casing!

Deformation of the casing may result in the motor jam and excessive noise.

Mount the fan on the wall or ceiling using four dowels with screws (included in the delivery set).

Dowels and screws are designed for concrete and brick walls.

If the walls are made of the other material (drywall, wood, etc.), use the fasteners appropriate for these materials to fasten the fan (not supplied with the fan and must be purchased separately).

**WARNING! When the fan is equipped with a non-return valve, operation of the fan without this valve is prohibited.**
The fan mounting sequence is shown in Fig. 4-11. The fan wiring diagrams are shown in Fig. 12-14. Terminal designations on the wiring diagrams:

- **L**: line/∼12 V
- **N**: neutral/∼12 V
- **LT**: timer control line
- **S**: external switch
- **QF**: double pole circuit breaker

**WARNING!** The fans rated for 12 V power voltage (stated on the packing box and on the fan casing) connect to ∼12 V power mains only!

**WARNING!** The power cable may only be laid through the hole in the casing provided by the manufacturer. Laying the power cable through a manually drilled hole will not be the liability of the manufacturer and will void the warranty. The wires must be stripped of insulation by a maximum of 8 mm.

After installation, pass this User’s manual to the end user for reading.

The unit with a protection rating against access to hazardous parts and water ingress IP34 is allowed to be installed in zone 2, according to IEC 60364-7-701:2019.
**ELECTRONIC SYSTEM OPERATION ALGORITHM**

The T model fans equipped with a timer are activated by control voltage application to input terminal LT by an external switch S (e.g. indoor light switch). After the control voltage is off, the fan continues to operate within the set time period adjustable from 2 to 30 minutes by the timer. For the VT model, the fan is turned on/off with an internal cord switch.

The fan with a timer and a humidity sensor (TH) — the fan starts after the control voltage is supplied to the input terminal LT or if indoor humidity level H exceeds the set point adjustable from ~60 % to ~90 %. After the control voltage is off or the humidity level H has decreased, the fan will keep running within the time, set by the turn-off delay timer, ranging from 2 to 30 minutes.

- **T<sub>off</sub>** — to adjust the fan turn-off delay time, turn the control knob T<sub>off</sub> clockwise to increase and counter-clockwise to decrease the turn-off delay time, adjustable from 2 up to 30 minutes.

- **H** — to adjust the humidity set point, turn the control knob H clockwise to increase and counter-clockwise to decrease the humidity sensor set point, adjustable from 60 % up to 90 %.

The fan delivery set includes a specially designed plastic screwdriver for fan settings adjustments. Use it to change the turn-on and turn-off delay time and the humidity set point.

---

**DO NOT USE A METAL SCREWDRIVER, KNIFE, ETC. FOR ADJUSTMENT OPERATIONS NOT TO DAMAGE THE CIRCUIT BOARD.**
TECHNICAL MAINTENANCE
The fan maintenance periodicity is at least once per 6 months.

Maintenance steps:
- disconnect the fan from power supply and take steps to avoid unauthorized power supply connection (Fig. 15);
- remove decorative and front panels and clean the fan with a soft dry cloth or a brush (Fig. 16);
- wash the front panel under running water (Fig. 17);
- wipe the fan surfaces dry;
- attach the front panel to the fan;
- connect power supply (Fig. 18).

WARNING! Do not allow water or liquid come into contact with electric components!

STORAGE AND TRANSPORTATION REGULATIONS

- Store the unit in the manufacturer’s original packaging box in a dry closed ventilated premise with temperature range from +5 °C to +40 °C and relative humidity up to 70 %.
- Storage environment must not contain aggressive vapors and chemical mixtures provoking corrosion, insulation, and sealing deformation.
- Use suitable hoist machinery for handling and storage operations to prevent possible damage to the unit.
- Follow the handling requirements applicable for the particular type of cargo.
- The unit can be carried in the original packaging by any mode of transport provided proper protection against precipitation and mechanical damage. The unit must be transported only in the working position.
- Avoid sharp blows, scratches, or rough handling during loading and unloading.
- Prior to the initial power-up after transportation at low temperatures, allow the unit to warm up at operating temperature for at least 3-4 hours.
MANUFACTURER’S WARRANTY

The manufacturer hereby warrants normal operation of the unit for 60 months after the retail sale date provided the user’s observance of the transportation, storage, installation, and operation regulations. Should any malfunctions occur in the course of the unit operation through the Manufacturer’s fault during the guaranteed period of operation, the user is entitled to get all the faults eliminated by the manufacturer by means of warranty repair at the factory free of charge. The warranty repair includes work specific to elimination of faults in the unit operation to ensure its intended use by the user within the guaranteed period of operation. The faults are eliminated by means of replacement or repair of the unit components or a specific part of such unit component.

The warranty repair does not include:

- routine technical maintenance
- unit installation/dismantling
- unit setup

To benefit from warranty repair, the user must provide the unit, the user’s manual with the purchase date stamp, and the payment paperwork certifying the purchase. The unit model must comply with the one stated in the user’s manual. Contact the Seller for warranty service.

The manufacturer’s warranty does not apply to the following cases:

- User’s failure to submit the unit with the entire delivery package as stated in the user’s manual including submission with missing component parts previously dismounted by the user.
- Mismatch of the unit model and the brand name with the information stated on the unit packaging and in the user’s manual.
- User’s failure to ensure timely technical maintenance of the unit.
- External damage to the unit casing (excluding external modifications as required for installation) and internal components caused by the user.
- Redesign or engineering changes to the unit.
• Replacement and use of any assemblies, parts and components not approved by the manufacturer.
• Unit misuse.
• Violation of the unit installation regulations by the user.
• Violation of the unit control regulations by the user.
• Unit connection to power mains with a voltage different from the one stated in the user’s manual.
• Unit breakdown due to voltage surges in power mains.
• Discretionary repair of the unit by the user.
• Unit repair by any persons without the manufacturer’s authorization.
• Expiration of the unit warranty period.
• Violation of the unit transportation regulations by the user.
• Violation of the unit storage regulations by the user.
• Wrongful actions against the unit committed by third parties.
• Unit breakdown due to circumstances of insuperable force (fire, flood, earthquake, war, hostilities of any kind, blockades).
• Missing seals if provided by the user’s manual.
• Failure to submit the user’s manual with the unit purchase date stamp.
• Missing payment paperwork certifying the unit purchase.

FOLLOWING THE REGULATIONS STIPULATED HEREIN WILL ENSURE A LONG AND TROUBLE-FREE OPERATION OF THE UNIT.

USER’S WARRANTY CLAIMS SHALL BE SUBJECT TO REVIEW ONLY UPON PRESENTATION OF THE UNIT, THE PAYMENT DOCUMENT AND THE USER’S MANUAL WITH THE PURCHASE DATE STAMP.
