Series

VENTS MPA 700 W EC A31

Air supply units with the air flow up to **4950 m³/h** in the sound- and heat-insulated casing

Description

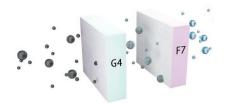

Air supply MPA EC unit is a complete ventilation unit for air filtration, air heating and supply to premises.

Casing

Steel casing covered with aluzinc coating internally filled with 30 mm heat- and sound-insulating layer made of mineral wool.

Filter

The unit is equipped with a Coarse 60%/G4 filter. An ePM10 90%/F7 class filter is optionally available.

Heater

Water heater is used for heating of supply air in cold season.

Fans

The units are equipped with high-efficient EC-motors with an external rotor and a centrifugal impeller.

Mounting

The air handling unit is mounted on the floor, suspended to the ceiling or mounted on the wall using brackets.

The unit can be mounted either in service spaces or in main premises (above a false ceiling, in a niche or on a surface).

All electrical connections are made through the terminal block located in the junction box.

It is necessary to provide access to the unit for service and filter cleaning.

Control and automation

Functions

The MPA W EC units are equipped with integrated control system. The A31 controller allows integrating the unit into the Building Management System (BMS). Remote control panel is not included in the delivery set and is available as specially ardered accessory.

runctions	ASI
Wired control panel	A30
Wired control panel	A32
Unit on / off	+
Fan speed control and setting	+
Filter clogging indication and control	Pressure sensor
Week schedule	+
Electric heater protection with auto restart	+
Electric heater protection with manual restart	+
Supply temperature control	+
Outer temperature sensor	+
Water heater frost protection	+
Return temperature sensor	+
Air damper control	+
Alarm indication	+
BMS Connection	ModBUS (RTU)
Humidity sensor	0-10 V or NO
CO ₂ Sensor	0-10 V or NO
Exhaust fan control	on / off
Three-way valve control	+
Circulation pump control	+

Condensing unit control

Hot water coil parameters MPA 700 W EC A31

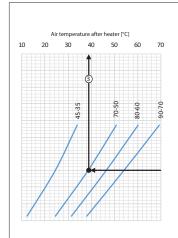

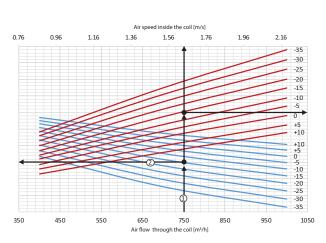

- Air Speed. Starting from 500 m³/h on the air flow scale draw a vertical line 1 till the air speed axis which makes about 2.1 m/s.
- Supply air temperature. Prolong the line ① up to the point where it crosses the outside air temperature (blue curve), e.g. -20 °C; then draw a horizontal line ② from this point to the left till crossing water in/out
- Supply air temperature. Prolong the line ⑤ up to the point where it crosses the duside air temperature (blue curve), e.g. -20 °C; then draw a nonzontal line ⑥ from this point to the left till crosses water in/out temperature accurve (70/50 °C). From this point draw a vertical line ⑥ up to the point where it crosses the outside air temperature -20 °C (red curve) and draw a horizontal line ⑥ from this point to the right until it crosses water in/out temperature curve (70/50 °C), from here draw a vertical line ⑤ up to the scale representing the heating coil capacity (11 kW).

 Water flow. Prolong the line ⑤ down to water flow axis at the bottom of the graphic ⑥ (600 kg/h).

 Water pressure drop. Draw the line ⑦ from the point where line ⑥ crosses the black curve to the pressure drop axis. (3 kPa).

Hot water coil parameters MPA 1000 W EC A31

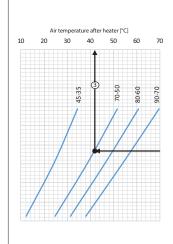

How to use water heater diagrams

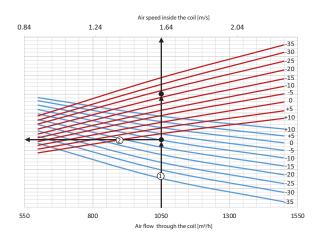

- Air Speed. Starting from 750 m³/h on the air flow scale draw a vertical line 1 till the air speed axis which makes about 1.6 m/s.
- Supply air temperature. Prolong the line ① up to the point where it crosses the outside air temperature (blue curve), e.g. -15 °C; then draw a horizontal line ② from this point to the left till crossing water in/out temperature curve (70/50 °C). From this point draw a vertical line 3 to the supply air temperature axis on top of the graphic (+39 °C).
- Heating coil capacity. Prolong the line ① up to the point where it crosses the outside air temperature -15 °C (red curve) and draw a horizontal line ④ from this point to the right until it crosses water in/out temperature
- curve (70/50 °C), from here draw a vertical line ⑤ up to the scale representing the heating coil capacity (16 kW).

 Water flow. Prolong the line ⑤ down to water flow axis at the bottom of the graphic ⑥ (1000 kg/h).

 Water pressure drop. Draw the line ⑦ from the point where line ⑥ crosses the black curve to the pressure drop axis. (6 kPa).

Hot water coil parameters MPA 1500 W EC A31

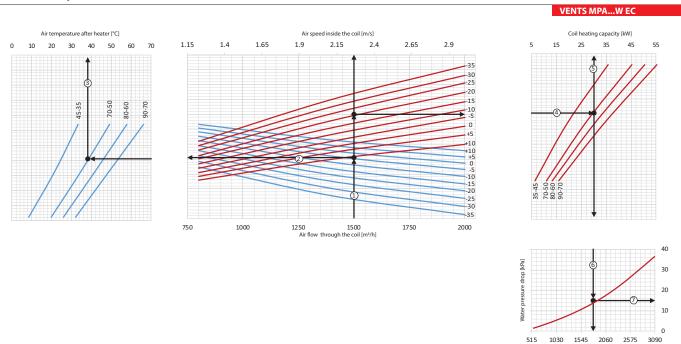

- Air Speed. Starting from 1050 m³/h on the air flow scale draw a vertical line ① till the air speed axis which makes about 1.6 m/s.
- Supply air temperature. Prolong the line 🛈 up to the point where it crosses the outside air temperature (blue curve), e.g. -10 °C; then draw a horizontal line 🛈 from this point to the left till crossing water in/out
- temperature curve (70/50 °C). From this point draw a vertical line ③ to the supply air temperature axis on top of the graphic (+41 °C).

 Heating coil capacity. Prolong the line ① up to the point where it crosses the outside air temperature -15 °C (red curve) and draw a horizontal line ④ from this point to the right until it crosses water in/out temperature curve (70/50 °C), from here draw a vertical line ⑤ up to the scale representing the heating coil capacity (22 kW).
- Water flow. Prolong the line ⑤ down to water flow axis at the bottom of the graphic ⑥ (1220 kg/h).
- Water pressure drop. Draw the line ⑦ from the point where line ⑥ crosses the black curve to the pressure drop axis. (8.5 kPa).

Hot water coil parameters MPA 2000 W EC A31

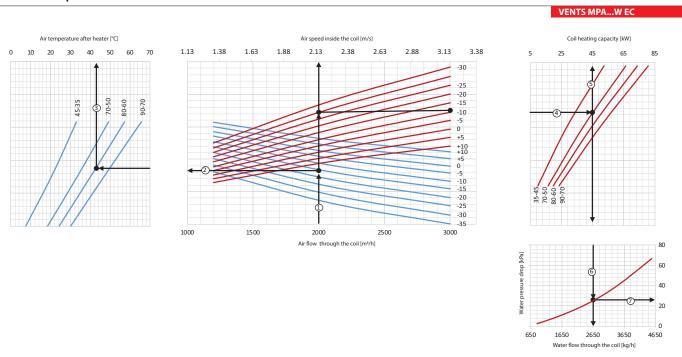

How to use water heater diagrams

- Air Speed. Starting from 1500 m³/h on the air flow scale draw a vertical line 1 till the air speed axis which makes about 2.25 m/s.
- Supply air temperature. Prolong the line ① up to the point where it crosses the outside air temperature (blue curve), e.g. -5 °C; then draw a horizontal line ② from this point to the left till crossing water in/out temperature curve (70/50 °C). From this point draw a vertical line 3 to the supply air temperature axis on top of the graphic (+38 °C).
- Heating coil capacity. Prolong the line ① up to the point where it crosses the outside air temperature -15 °C (red curve) and draw a horizontal line ④ from this point to the right until it crosses water in/out temperature curve (70/50 °C), from here draw a vertical line ③ up to the scale representing the heating coil capacity (30 kW).

 Water flow. Prolong the line ⑤ down to water flow axis at the bottom of the graphic ⑥ (1750 kg/h).

 Water pressure drop. Draw the line ⑦ from the point where line ⑥ crosses the black curve to the pressure drop axis. (15 kPa).

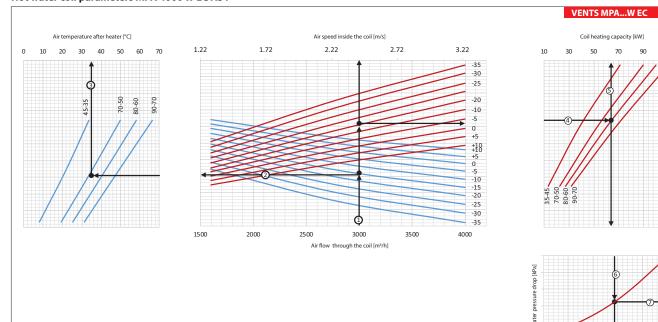

Hot water coil parameters MPA 3000 W EC A31

- Air Speed. Starting from 2000 m³/h on the air flow scale draw a vertical line ① till the air speed axis which makes about 2.2 m/s.
- Supply air temperature. Prolong the line ① up to the point where it crosses the outside air temperature (blue curve), e.g. -15 °C; then draw a horizontal line ② from this point to the left till crossing water in/out
- temperature curve (80/60 °C). From this point draw a vertical line ③ to the supply air temperature axis on top of the graphic (+43 °C).

 Heating coil capacity. Prolong the line ① up to the point where it crosses the outside air temperature -15 °C (red curve) and draw a horizontal line ④ from this point to the right until it crosses water in/out temperature curve (70/50 °C), from here draw a vertical line ⑤ up to the scale representing the heating coil capacity (45 kW).
- Water flow. Prolong the line ⑤ down to water flow axis at the bottom of the graphic ⑥ (2650 kg/h).
- Water pressure drop. Draw the line ⑦ from the point where line ⑥ crosses the black curve to the pressure drop axis. (24 kPa)
