

# AIR HEATING (COOLING) UNITS

## ► VENTS AOW Series

- ▶ Air unit with the water heat exchanger with heating capacity up to 45 kW and the air capacity up to 3850 m<sup>3</sup>/h. Designed for cost-saving and efficient air heating and cooling in various premises.

## ► VENTS PVZ Series

- ▶ Air curtains are designed against cold or hot air stream penetration into door or window openings. Can be equipped with water heating coils or electrical heating batteries. Available standard sizes: 600x350, 700x400, 800x500, 900x500 mm.

Series  
**AOW**

Air heating (cooling) units with the water heat exchanger for cost-saving and effective air heating or cooling.

**■ Applications**

Designed for air heating or cooling by water heat medium with subsequent uniform air distribution by the fan and louvre shutters. The units provide quick heating or cooling of large premises due to high efficient air heater and powerful fan and are suitable for local air heating or cooling of working areas in hangars or large industrial premises. Further applications include workshops, garages, car showrooms, stock houses, trade facilities, super- and hypermarkets, shops, sport halls, conference halls, poultry and cattle farms, greenhouses and other similar premises. The unit design enables quick and

easy mounting and reduces total investment costs for heating (cooling) system.

**■ Design**

AOW unit consists of axial fan and aluminium-copper ribbed water heating coils located in steel casing with polymeric covering. The water coils are equipped with internally threaded pipes for connection to the heat medium.

**■ Motor**

AC motors with external rotor and built-in thermal overheating protection with automatic restart.

**■ Control and regulation**

Both smooth or step speed control is performed by the thymistor or autotransformer controller. Motor speed decrease allows reducing air flow and value of heating or cooling energy transfer. The heat medium flow can be regulated in various ways.

**■ Mounting**

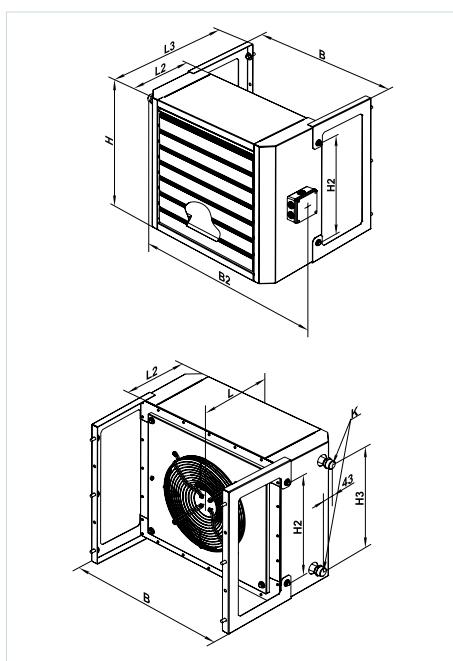

The heat fan can be installed vertically on walls or columns or horizontally on ceiling or beams.

**Air heating (cooling) advantages:**

- ▶ quick attaining of the set temperature in the premises,
- ▶ low system response time allows applying varying temperature conditions,
- ▶ high thermal capacity,
- ▶ investment costs for air heating (cooling) system are much lower as compared to the similar water heating (cooling) system.
